Fine-Tune and Adjust The Joule Output

Variable Mass Piston

MT-93

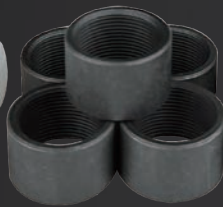

Include 5 Steel flyweights, 5 Aluminum flyweights, 5 POM flyweights, and a piston in the set. Users can finely tune the joule output with weighted flyweights to match inner barrel length, spring power, BB weights, and shooting range. The adjustable range of the piston is from 80.6g to 176g.

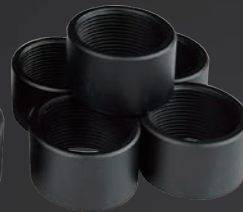

80.6g

MT-92

Piston Cup with Air Brake

Reduce Shooting Noise

Three air brakes with different lengths. Air brakes blocks the air flow while the piston operates, resulting a vacuum condition in the cylinder which can lower the impact noise when the piston hits the cylinder. This is possibly at the cost of less air flow and muzzle energy reduction.

Lower Air Volume for Easier & Faster Pulling Action

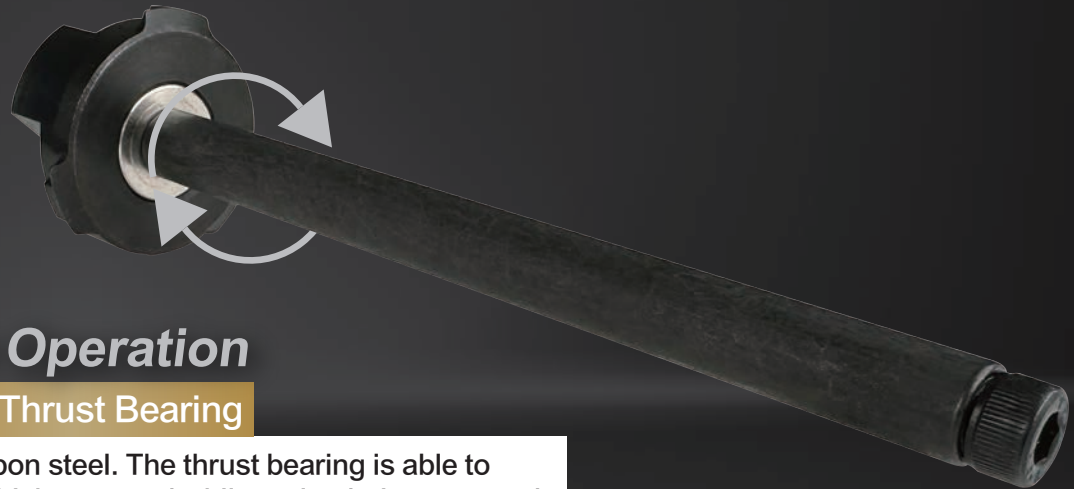

MT-94

Variable Capacity Cup

The capacity ring is installed between piston and piston head to make the piston longer. The piston with capacity ring is going to cock into place earlier comparing to the one that is without capacity ring installed, resulting in a reduction of the air volume and the FPS. Three capacity rings in a set, 6cc air volume reduction with one ring installed.

-6cc*3

Smoother Operation

Steel Spring Guide with Thrust Bearing

MT-95

Made with CNC machined carbon steel. The thrust bearing is able to countervail rotational stress which occurred while spring being stressed. This can effectively reduce spring deformation and having a smoother piston operation.
